

ACG7 Std Line

Product Description

Flow volume:	80 - 1200 l/min
Max differential pressure:	16 bar
Applications:	Circulation, lubrication and transfer

1. Applications

1.1 Functionality

The Std Line (standard) ACG pumps come in two executions; Lube Line and Fuel Line. The main difference is the shaft seal design, optimized for light duty and heavy duty respectively.

The ACG pumps are used for a number of different fluids:

Lubrication oil, fuel oil, vegetable oil, hydraulic oil and other hydraulic fluids, polymers, emulsions and any non-aggressive fluid with sufficient lubricating properties.

If requested, the ACG pump may be certified according to any of following classification societies: DNV, BV, LRS, ABS, RS, GL, RINA, KR, NK, RMR or CCS.

1.2 Applications

Typical applications are:

- Lubrication of diesel engines, gears, gas and steam turbines, hydro turbines and paper machines
- Circulation for cooling and filtration in large machineries, hydraulic systems and transformer oil for insulation in transformers
- As transfer pumps onboard vessels, in power plants, oil factories, refineries, tank farms etc
- For supply and circulation systems

1.3 Use in potentially explosive areas

The pump fulfils the requirements according to EU explosion-protection directive 2014/34/EU (ATEX 100a) for devices in device class II, category 2G.

Classification into temperature classes according to DIN EN 80079-36 depends on the temperature of the pumped liquid.

Refer to the proposal or order documentation for the maximum permissible liquid temperature for the respective temperature classes.

Note: When operating the pump in category 2, suitable measures must be provided to prevent impermissible warming of the pump surfaces in the event of disturbance.

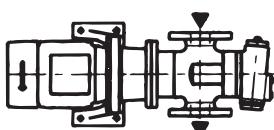

1.4 Installation

The pump is designed to be flange-mounted to its electric motor via a connecting frame and a flexible shaft coupling. By the angle bracket, the pump might be mounted horizontally or vertically.

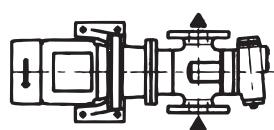

As standard, the pump is supplied without counter flanges (DIN type) but they can be included if requested.

As standard the pump is delivered with the discharge side to the right when seen from the pump shaft side(see below).

For more information about installation, see Installation and Start-up instruction for low pressure pumps.

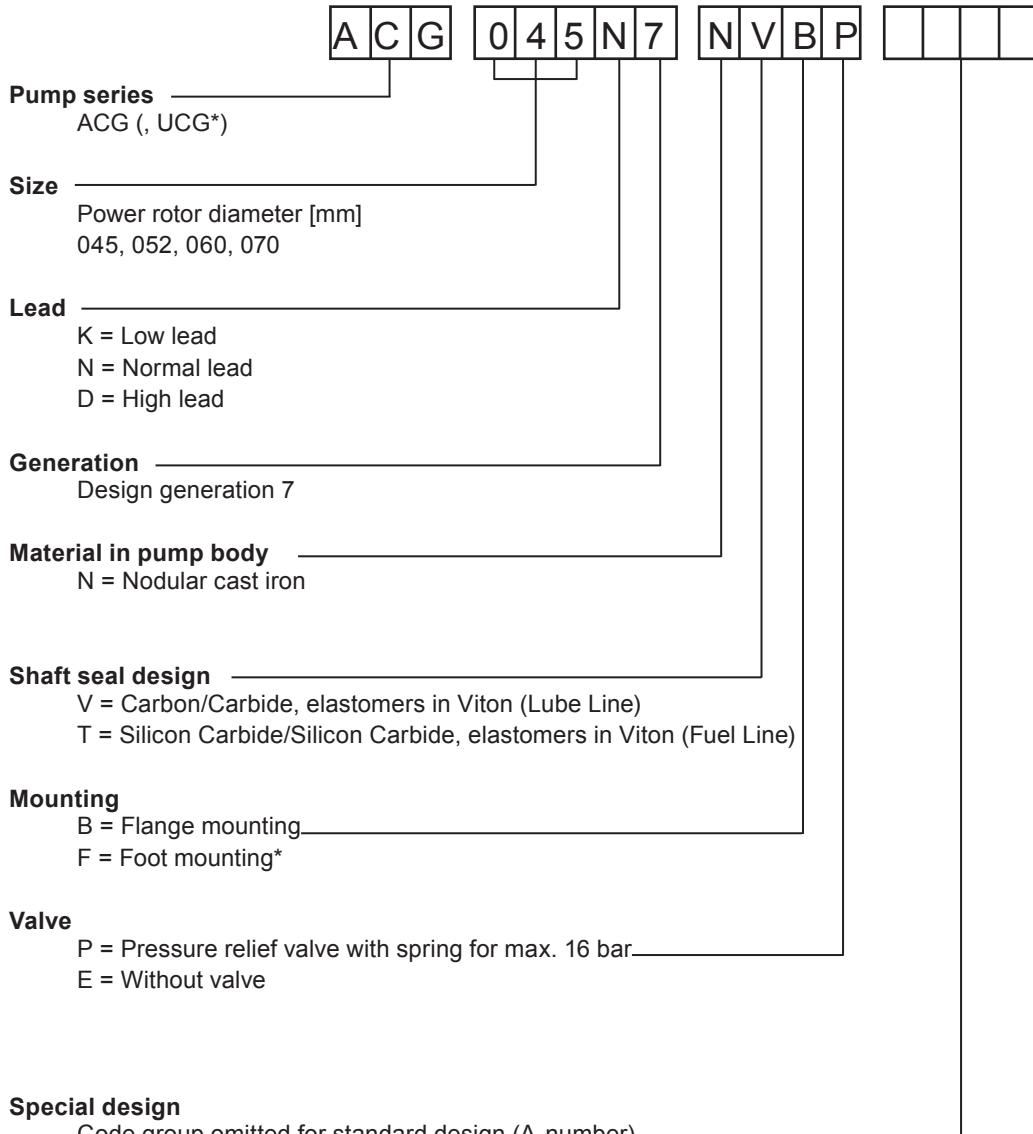

Mounting standard picture M93-0.

On request the pump can be delivered in the opposite direction, M39-0.

2. Pump model code

* For UCG and foot-mounted models, please contact IMO AB.

3. Technical Data

3.1 Pressure Information

Pressure relief valve

The pump is equipped with an integral pressure relief valve with internal return, limiting the differential pressure across the pump and protecting the pump. Should the discharge line be blocked, the relief valve will open by the pressure.

The valve is adjustable for different opening pressures. The value of the pressure limit can be set at the factory and should be adjusted at installation (see Installation & Start-up instruction for low-pressure pumps).

The maximum pressure accumulation varies with pump size, speed and viscosity, but will normally not exceed 4 bar.

The valve has a maximum set pressure of 16 bar.

Inlet pressure

Minimum inlet pressure (suction capability) is dependent on fluid viscosity and rotation speed. It increases with decreasing viscosity and decreasing speed. Information about minimum inlet pressure for each individual duty case can be obtained from IMO AB or pump selection software WinPump.

Maximum inlet pressure is 12 bar.

Discharge pressure

Maximum discharge pressure is 16 bar.

Differential pressure

Maximum differential pressure is 16 bar but reduced at low viscosities according to table below

Viscosity [cSt]	1,4	2	6	10	>12
-----------------	-----	---	---	----	-----

Max. diff. pressure [bar]	6,9	8,0	12,4	15	16
---------------------------	-----	-----	------	----	----

Refer to your IMO representative or use the pump selection software WinPump to determine the exact operating limits.

3.2 Driver information

Driver type

The pump is designed primarily for direct drive through a flexible shaft coupling.

Under certain conditions other types of drive can be permitted, e.g. gear or pulley drives, which create radial loads onto the shaft end. Permissible radial force varies with pressure, speed and inlet conditions.

For radial load requirements, contact IMO AB.

Speed

The maximum speed is 3600 rpm. Max. operating speed may be reduced depending on inlet conditions. Contact IMO or use the pump selection software WinPump to find a corresponding speed limit in order to avoid cavitation problems.

Rotation

The pump is designed to operate in one rotational direction only, as standard clockwise when facing the shaft end. Pumps for CCW operation can be delivered on special request.

For shorter periods of time, a few minutes for emptying a discharge line, the pump may be operated in reverse direction, provided the back pressure is limited to 3 bar.

3. Technical Data

3.3 Sound level

Typical pump sound levels refer to free field conditions at a distance of 1 m from the pump. Noise of driver excluded in the quoted figures. The sound levels are measured at a discharge pressure of 5 bar, speed 2900 rpm and viscosity 37 cSt.

Size	045	052	060	070
Sound level dB [A]	59	63	66	68

3.4 Moment of Inertia

Moment of inertia [10^{-3} kgm 2]

Size	045	052	060	070
Value	0,26	0,51	1,1	2,2

3.5 Fluid viscosity

Lube Line seal (Seal version code V):

1,4 – 800 cSt for Lube and hydraulic oil

Fuel Line seal (Seal version code T):

1,4 – 3500 cSt for Fuel oil

For higher viscosity, contact IMO AB.

3.6 Fluid temperature

Lube Line (Seal version code V): -20 – +90 °C

Fuel Line (Seal version code T): -20 – +155 °C

4. Design

4.1 Ball bearing

The pump is fitted with an external lubricated ball bearing. When delivered from IMO AB, the ball bearing is filled with grease.

For more information, see Maintenance and Service Instructions.

4.2 Material & design

Model	Material pump	Material rotor	Material idler	Material seal	Material Elastomers
ACG NVBP	Nodular cast iron	Steel, surface treated	Cast iron, surface treated	Carbon/Silicon Carbide	Viton
ACG NTBP	Nodular cast iron	Steel, surface treated	Cast iron, surface treated	Silicon Carbide/ Silicon Carbide	Viton

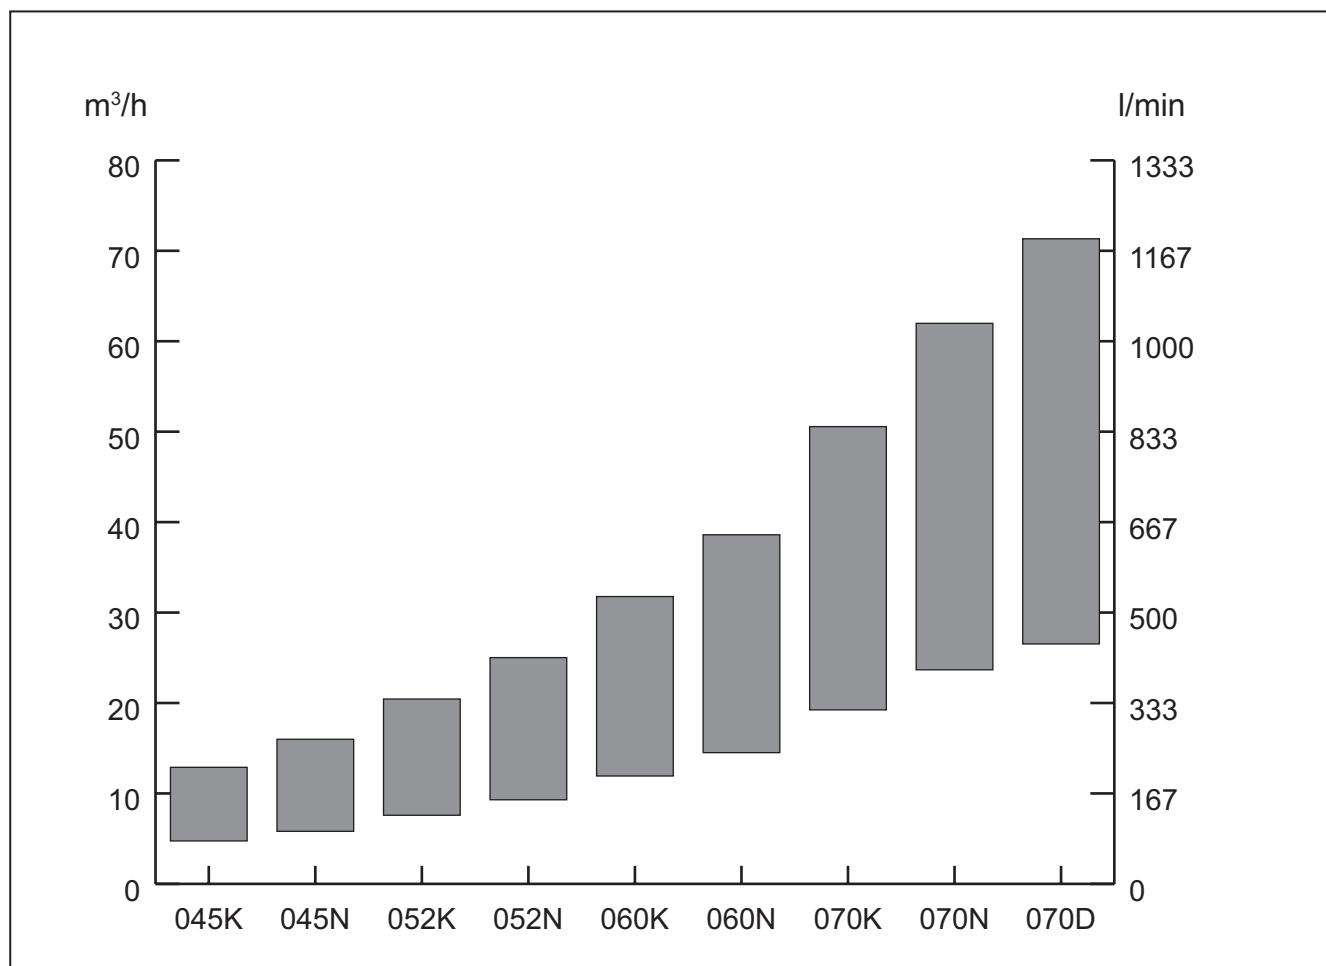

For handling of fluids which may be aggressive to above materials, consult IMO AB.

5. Performance Guide

Typical performance values at 5 bar

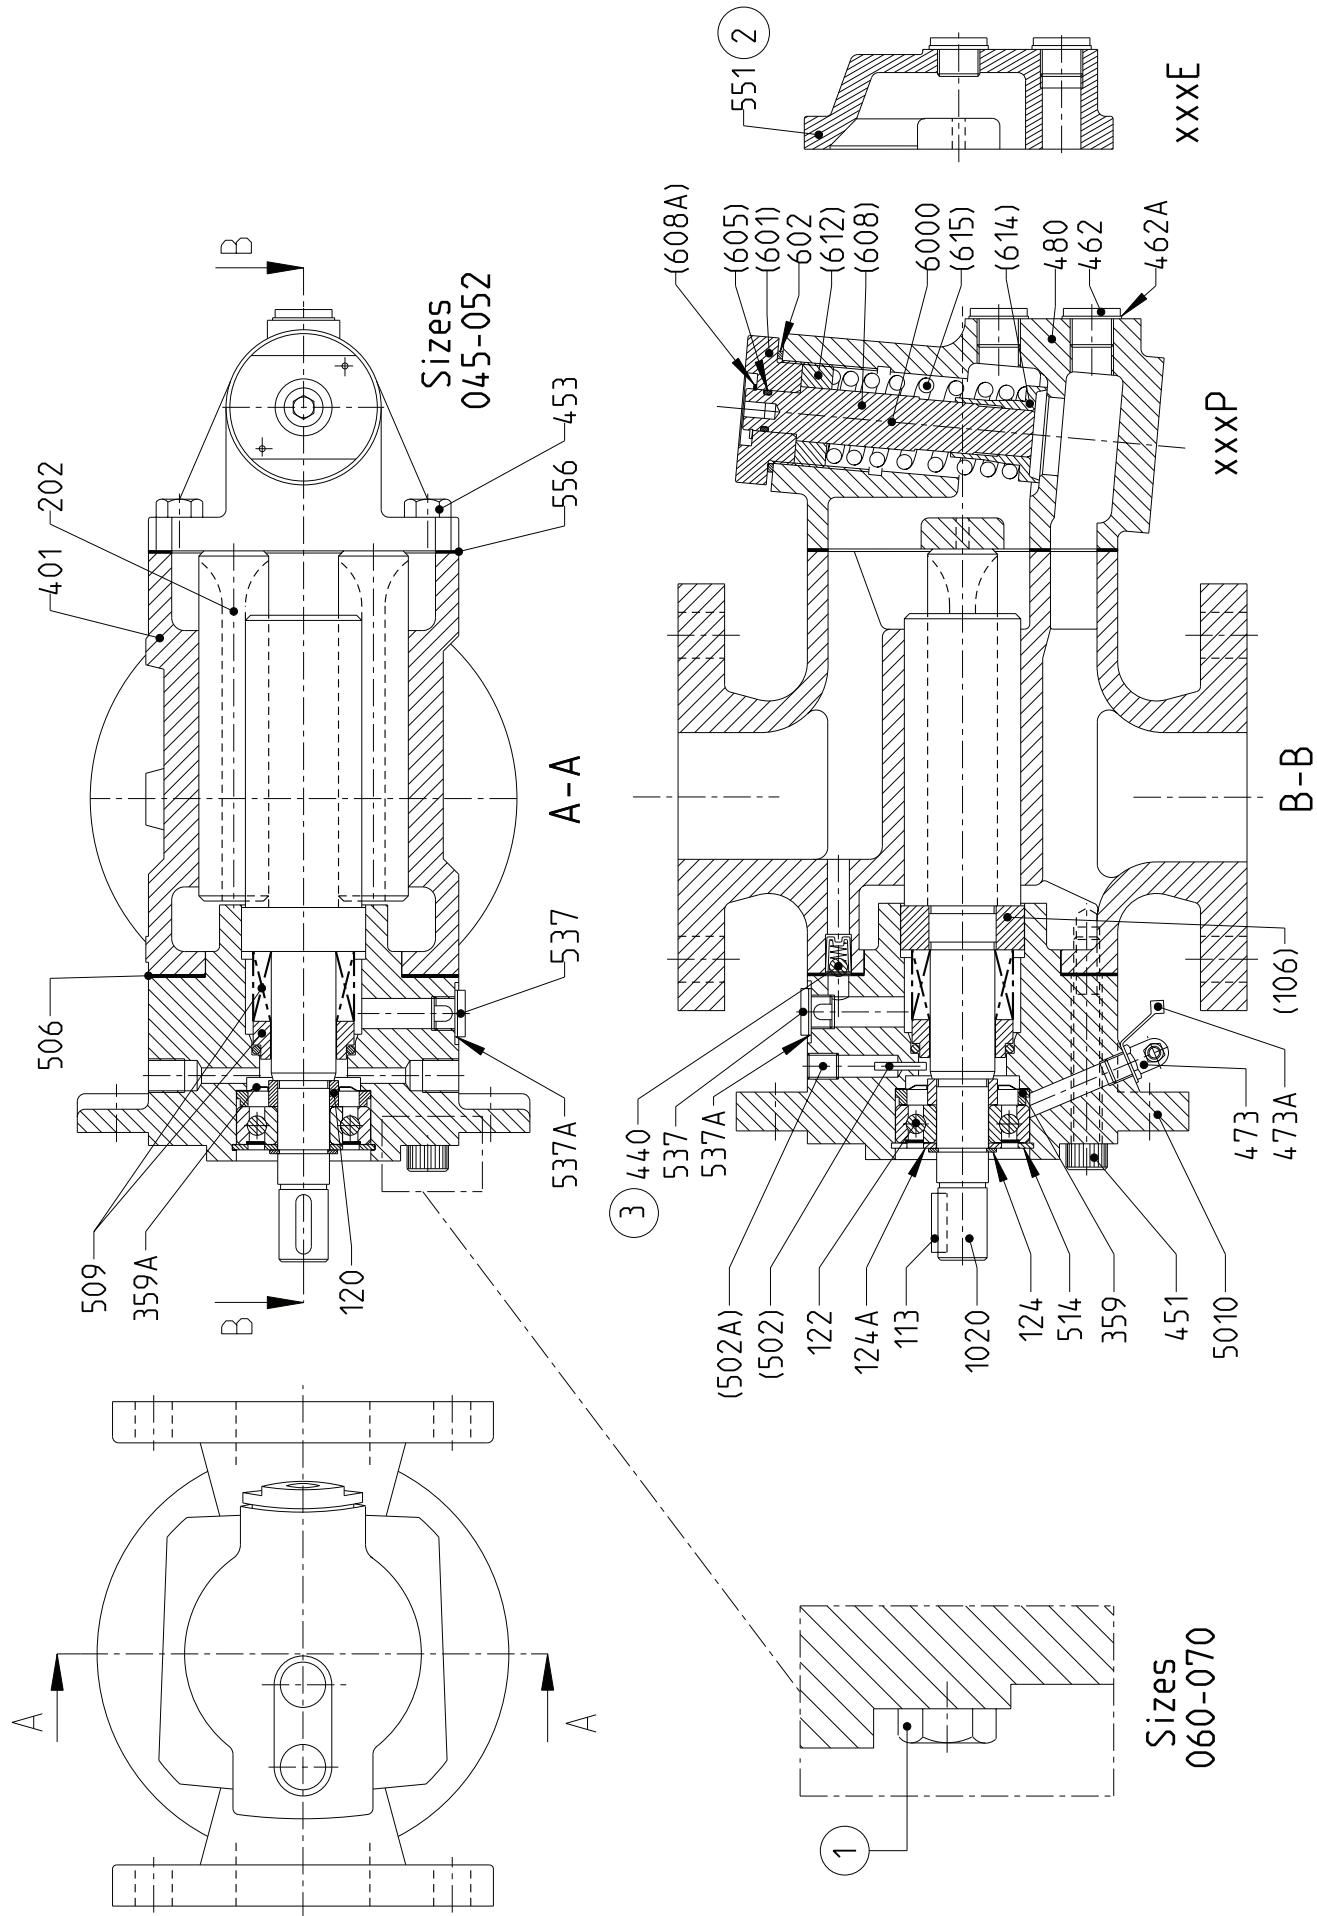

Flow calculated at 26 cSt, power at 260 cSt.

Pump performance established according to EN 14343.

rpm	045L			045N			052K			052N		
	I/min	kW		I/min	kW		I/min	kW		I/min	kW	
1470	79	1,6		97	2,0		126	2,5		155	3,0	
1770	99	2,0		121	2,5		157	3,1		193	3,8	
2950	176	3,8		218	4,7		279	5,9		341	7,3	
3550	215	4,8		267	6,0		341	7,6		417	9,2	
rpm	060K			060N			070K			070N		
	I/min	kW		I/min	kW		I/min	kW		I/min	kW	
1470	199	3,8		242	4,6		321	3,8		395	4,6	442 7,5
1770	246	4,8		300	5,8		396	4,8		487	5,8	550 9,4

7. List of Components

Pos No	Denomination	Pos No	Denomination
1020	Complete power rotor	453	Screw
(106)	Balancing piston	462	Plug
113	Key	462A	Sealing washer
120	Distance sleeve	473	Grease nipple
122	Ball bearing	473A	Grease nipple cover
124	Retaining ring	480	Valve housing
124A	Support ring	5010	Complete front cover
202	Idler rotor	(502)	Tension pin
359	Distance washer	(502A)	Plug
359A	Support ring	506	Gasket
401	Pump body	509	Shaft seal
440	Return valve	514	Retaining ring
451	Screw	537	Deaeration plug
		537A	Sealing washer
		551	Rear cover
		556	Gasket
		6000	Complete valve element
		(601)	Valve top cover
		(605)	O-ring
		(608)	Valve spindle
		(608A)	Retaining ring
		(612)	Regulating nut
		(614)	Valve piston
		(615)	Valve spring
		602	Sealing washer

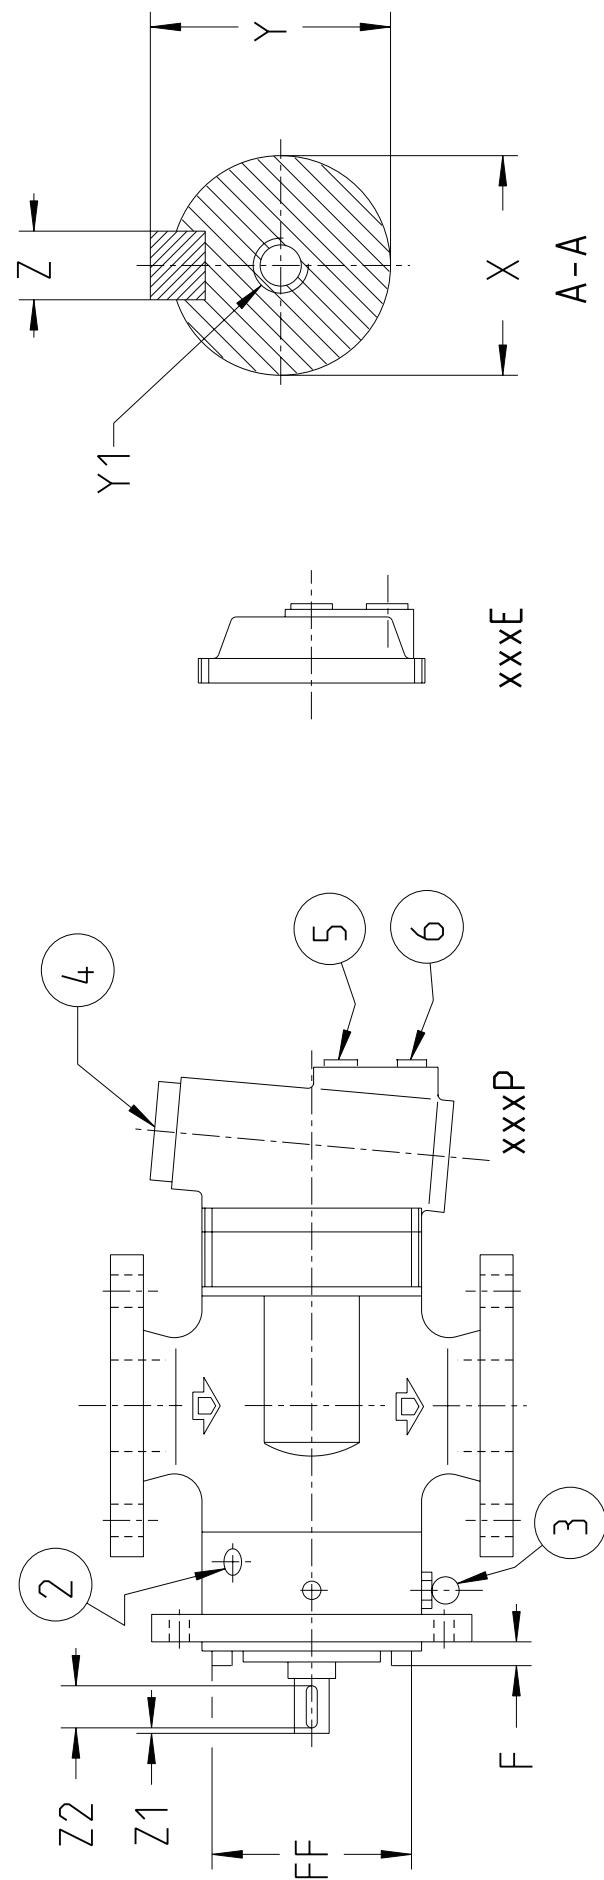

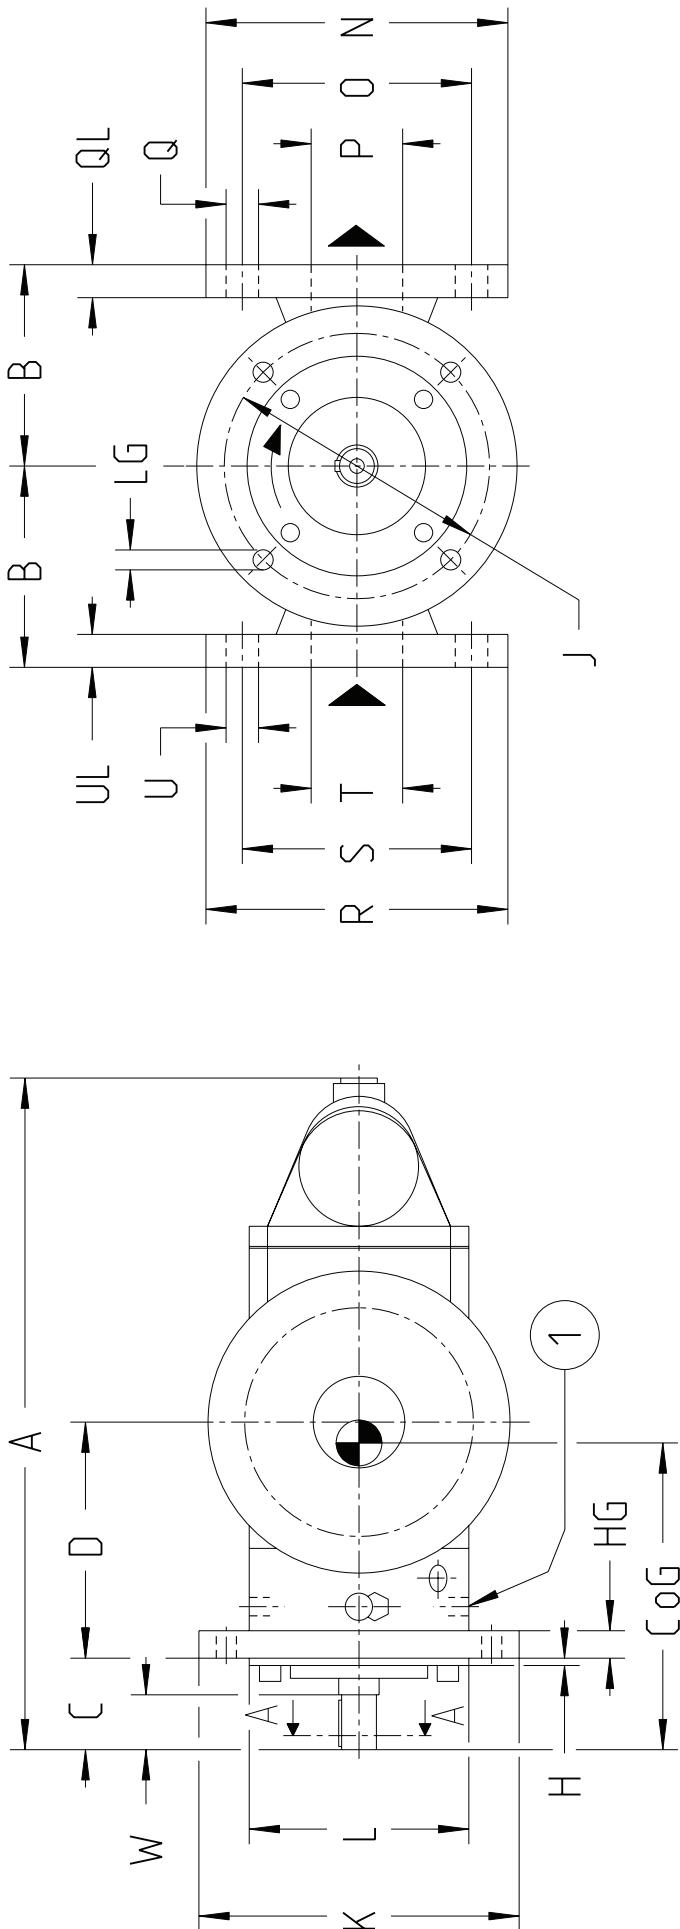

Drawing remarks:

- (1) Hexagon bolts valid for sizes 060-070
- (2) Rear cover. Execution code xxxE
- (3) Removed from August 2011

Notes:

- Components with Pos No within parenthesis are parts of subassembly

8. Pump Dimensions

8. Pump Dimensions

- Drawing remarks:
- (1) Drain ISO G1/4
 - (2) Deraeration
 - (3) Grease nipple
 - (4) Relief valve. Turn clockwise to increase opening pressure
 - (5) Inlet gauge. ISO G3/8
 - (6) Outlet gauge. ISO G3/8

- Notes:
- Dimensions in mm
 - Counter flanges according to DIN2633/ND16
 - Weight is an approximate value

- 1) Tolerances ISO h7
2) Tolerances ISO j6

9. Pump Unit dimensions

9. Pump Unit dimensions

Drawing remarks:

- (1) Outlet gauge. ISO G3/8
 - (2) Inlet gauge. ISO G3/8
 - (3) Control for relief valve
 - (4) Grease nipple
 - (5) Drain. ISO G1/4
 - (6) Degaeration
 - (7) Space for dismantling

Notes:

- Dimensions in mm
 - Dimensions A, A1 and AC are valid for Brook Crompton motors type WU-DA
 - Weight is an approximate value
 - Foot VDMA 24 561 PTFL

10. Accessories

A bare shaft pump (Fig. 1) can be ordered with the accessories in fig. 2-7.
