

Liquid ring vacuum pumps

two stage

LPH 75320, LPH 75330, LPH 75340

Pressure range: 33 to 1013 mbar
suction volume: 500 to 1700 m³/h

CONSTRUCTION

Sterling SIHI liquid ring vacuum pumps are displacement pumps of uncomplicated and robust construction with the following particular features:

- handling of nearly all gasses and vapours
- non polluting due to a nearly isothermal compression
- oil-free, as no lubrication in the working chamber
- small quantities of entrained liquid can be handled
- easy maintenance and reliable operation
- low noise and nearly free from vibration
- wide choice of material, therefore applicable nearly anywhere
- protection against cavitation as standard
- incorporated dirt drain
- no metallic contact of the rotating parts

The Sterling SIHI liquid ring vacuum pumps LPH 75320, LPH 75330 and LPH 75340 are two stage pumps.

NOTE

During the operation the pump must continuously be supplied with service liquid, normally water, in order to eliminate the heat resulting from the gas compression and to replenish the liquid ring, because part of the liquid is leaving the pump together with the gas. This liquid can be separated from the gas in a liquid separator (see catalogue part accessories).

It is possible to reuse the service liquid. The pumps are with a device by which the contaminated service liquid can be drained during operation (dirt drain), if necessary.

The direction of the rotation is clockwise, when looking from the drive on the pump.

APPLICATIONS

Handling and exhausting of dry and humid gases; entrained liquid can be handled during normal duty. The pumps are applied in all fields where a pressure of 33...900 mbar must be created by robust vacuum pumps.

Fields of application are for example:

- chemistry and pharmacy for distilling and degassing,
- electric industry for impregnation and drying
- plastics industry for degassing etc.

GENERAL TECHNICAL DATA

Pump type	Unit	LPH 75320			LPH 75330			LPH 75340		
Speed	rpm	880	975 ¹⁾	1175	880	975 ¹⁾	1175	880	975 ¹⁾	1175

Cut-away diagram LPH 75320, LPH 75330, LPH 75340

Performance Characteristics LPH 75320

The operating data is valid under the following conditions:

- Process media:
 - dry air: 20°C _____
 - steam saturated air: 20°C (dotted line)
- Service liquid:
 - water: 15°C

Pressure of gas to be evacuated: 1013 mbar (atmospheric pressure)

The suction volume is related to the suction pressure.

Tolerance on operating data is 10%.

The maximum consumption of make-up water occurs at the lowest suction pressure.

Performance Characteristics LPH 75330

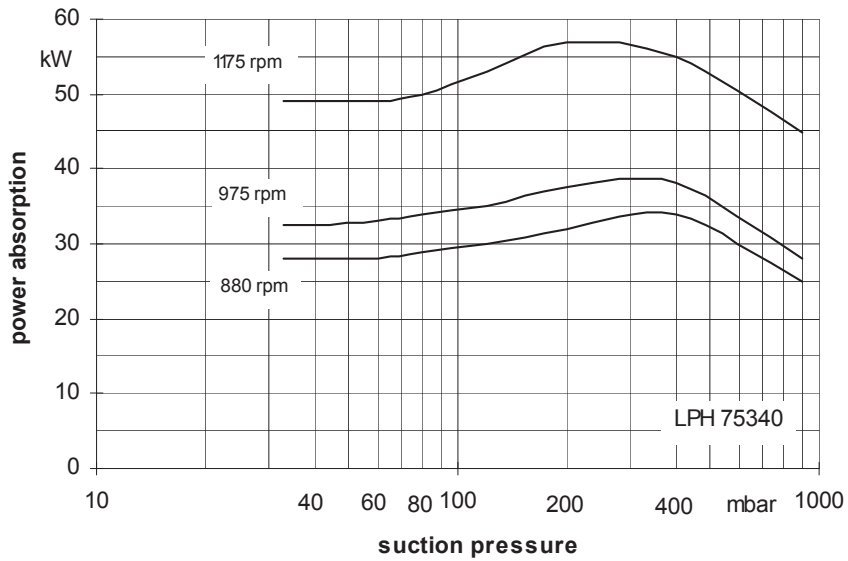

The operating data is valid under the following conditions:

- Process media:
 - dry air: 20°C _____
 - steam saturated air: 20°C - - - - -
- Service liquid:
 - water: 15°C _____

Pressure of gas to be evacuated: 1013 mbar (atmospheric pressure)
 The suction volume is related to the suction pressure.
 Tolerance on operating data is 10%.
 The maximum consumption of make-up water occurs at the lowest suction pressure.

Performance Characteristics LPH 75340

The operating data is valid under the following conditions:

- Process media:
 - dry air: 20°C _____
 - steam saturated air: 20°C - - - - -
- Service liquid:
 - water: 15°C

Pressure of gas to be evacuated: 1013 mbar (atmospheric pressure)

The suction volume is related to the suction pressure.

Tolerance on operating data is 10%.

The maximum consumption of make-up water occurs at the lowest suction pressure.
