

# Liquid ring vacuum pumps

## single-stage

## LPH 70123, LPH 70530, LPH 70540

**Pressure range:** 120 to 1013 mbar  
**Suction volume flow:** 500 to 1900 m<sup>3</sup>/h

### CONSTRUCTION TYPE

Sterling SIHI liquid ring vacuum pumps are displacement pumps of uncomplicated and robust construction with the following particular features:

- handling of nearly all gases and vapours
- non-polluting due to nearly isothermal compression
- oil-free, as no lubrication in the working chamber
- small quantities of entrained liquid can be handled
- easy maintenance and reliable operation
- low noise and nearly free from vibrations
- wide choice of material, therefore applicable nearly everywhere
- incorporated dirt drain
- incorporated central drain
- no metallic contact of the rotating parts

The Sterling SIHI liquid ring vacuum pumps LPH 70123, LPH 70530 and LPH 70540 are single-stage ones. They can be applied without modification as compressors up to a compression pressure of 1,5 bar ( see catalogue part K).

### APPLICATION

Handling and exhausting of dry and humid gases, entrained liquid can be handled during normal duty. The pumps are applied in all fields where a pressure of 120...900 mbar must be created by robust vacuum pumps.

Fields of application are for example

- chemistry and pharmacy for distilling and degassing
- electric industry for impregnation and drying
- plastics industry for degassing etc.

### NOTE

During operation the pump must continuously be supplied with service liquid, normally water, in order to eliminate the heat resulting from the gas compressor and to replenish the liquid ring, because part of the liquid is leaving the pump together with the gas. This liquid can be separated from the gas in a liquid separator (see catalogue part accessories).

It is possible to reuse the service liquid. The pumps are equipped with a device by which the contaminated service liquid can continuously be drained during operation (dirt drain), if necessary. The direction of rotation is clockwise, when looking from the drive on the pump.

### GENERAL TECHNICAL DATA

Pump type	unit	LPH 70123	LPH 70530	LPH 70540
Speed	rpm	880 975 <sup>1)</sup> 1175	880 975 <sup>1)</sup> 1175	880 975 <sup>1)</sup> 1175
Max. compression over pressure	bar		1,5	
Max. admissible pressure difference	bar	1,8 1,8 1,4 <sup>2)</sup> 1,8	1,8 1,7 1,4 <sup>2)</sup> 1,6	1,7 1,6 1,4 <sup>2)</sup> 1,5
Hydraulic test (over pressure)	bar		3	
Moment of inertial of the rotating pump parts and the water filling	kg · m <sup>2</sup>	1,36	1,76	2,26
Sound pressure level at a suction pressure of 200 mbar	dB (A)	76 77 78	78 79 80	78 79 80
Min. pulley diameter admissible in case of V-belt drive	mm	315 315 355	355	400
Max. gas temperature	dry °C saturated °C		200 100	
Service liquid				
max. admissible temperature	°C		100	
max. viscosity	mm <sup>2</sup> /s		90	
max. density	kg/m <sup>3</sup>		1200	
volume up to shaft level	liter	32	35	38
Max. flow resistance of the heat exchanger	bar		0,2	

The combination of several limiting values is not admissible.

<sup>1)</sup> normal speed

<sup>2)</sup> with V-belt drive

## Material design

Item.	COMPONENTS	MATERIAL DESIGN	
		02	42

## Sectional drawing LPH 70123, LPH 70530, LPH 70540

## Suction volume flow and power absorption LPH 70123

The operating data are applicable under the following conditions:

- pumping medium:
  - dry air: 20°C (solid line)
  - water vapour saturated air: 20°C (dashed line)
- service liquid:
  - water: 15°C

Compression pressure 1013 mbar (atmospheric pressure)

The suction volume flow is applied to the suction pressure

Tolerance of the operating data 10% and of the power absorption 5%

Max. fresh water need with the lowest suction pressure.

## Suction volume flow and power absorption LPH 70530

The operating data are applicable under the following conditions:

- pumping medium:
  - dry air: 20°C —————
  - water vapour saturated air: 20°C - - - - -
- service liquid:
  - water: 15°C

Compression pressure 1013 mbar (atmospheric pressure)  
 The suction volume flow is applied to the suction pressure  
 Tolerance of the operating data 10% and of the power absorption 5%  
 Max. fresh water need with the lowest suction pressure.

## Suction volume flow and power absorption LPH 70540

The operating data are applicable under the following conditions:

- pumping medium:
  - dry air: 20°C —————
  - water vapour saturated air: 20°C - - - - -
- service liquid:
  - water: 15°C

Compression pressure 1013 mbar (atmospheric pressure)

The suction volume flow is applied to the suction pressure

Tolerance of the operating data 10% and of the power absorption 5%

Max. fresh water need with the lowest suction pressure.
