

Pressure Range: 150 to 1013 mbar
Suction Range: 50 to 270 m³/h

CONSTRUCTION

Sterling SIHI liquid ring vacuum pumps have a simple but robust construction with the following features and benefits:

- Near isothermal compression
- Oil free, with no internal lubrication
- Capable of handling almost all gases and vapours
- Able to handle quantities of liquid "carry over"
- Low maintenance and safe operation
- Low noise and almost vibration free
- Available in a wide range of materials
- Broad range of applications
- O-ring sealing as standard
- Cavitation protection as standard
- Drain hole as standard
- Built-in solids drain
- Rotating metallic parts are non contacting to minimise wear
- ATEX compliance

Sterling SIHI liquid ring vacuum pumps of the range LPH 40106, LPH 40411 and LPH 40516 are one stage pumps. They can be used as compressors up to a pressure of 1.2 bar without any modification (see the Technical Catalogue - Liquid Ring Compressors Part K).

APPLICATIONS

Evacuation and pumping of dry gases and saturated vapours. The pumps can also handle liquids. These units offer pressures in the range of 150...900 mbar(a) to atmospheric. Typical application areas include:

- Chemical and pharmaceutical industry for distillation, drying and degassing
- Electronic industry for impregnation and drying
- Plastics & Rubber industry for degassing
- Food and beverage industry for bottle filling.

NOTE

By continuously feeding the pump with a small amount of service liquid (usually water), the heat due to gas/vapour compression is conducted away. This also replenishes the liquid ring and ensures that it does not become saturated with process media. The condensed gas and fluid can be separated in a liquid separator (see Accessories Catalogue). Recharging the pump with service liquid at ambient temperature enables the unit to condense evacuated gases/vapours. It can therefore be used for solvent recovery. More information is provided in the accessory catalogues. The integrated solids drain permits the removal of any entrained solids whilst the pump is operating. The service liquid can, therefore, simply be recirculated.

The rotation of the pump is clockwise when viewed from the drive end.

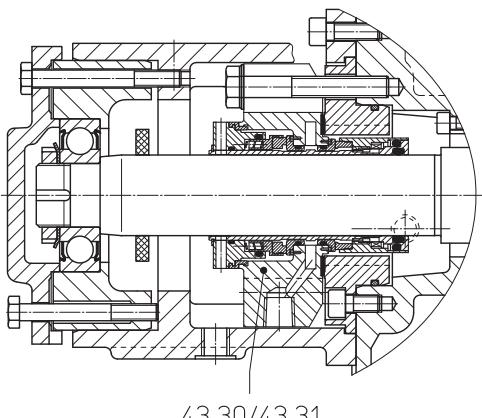

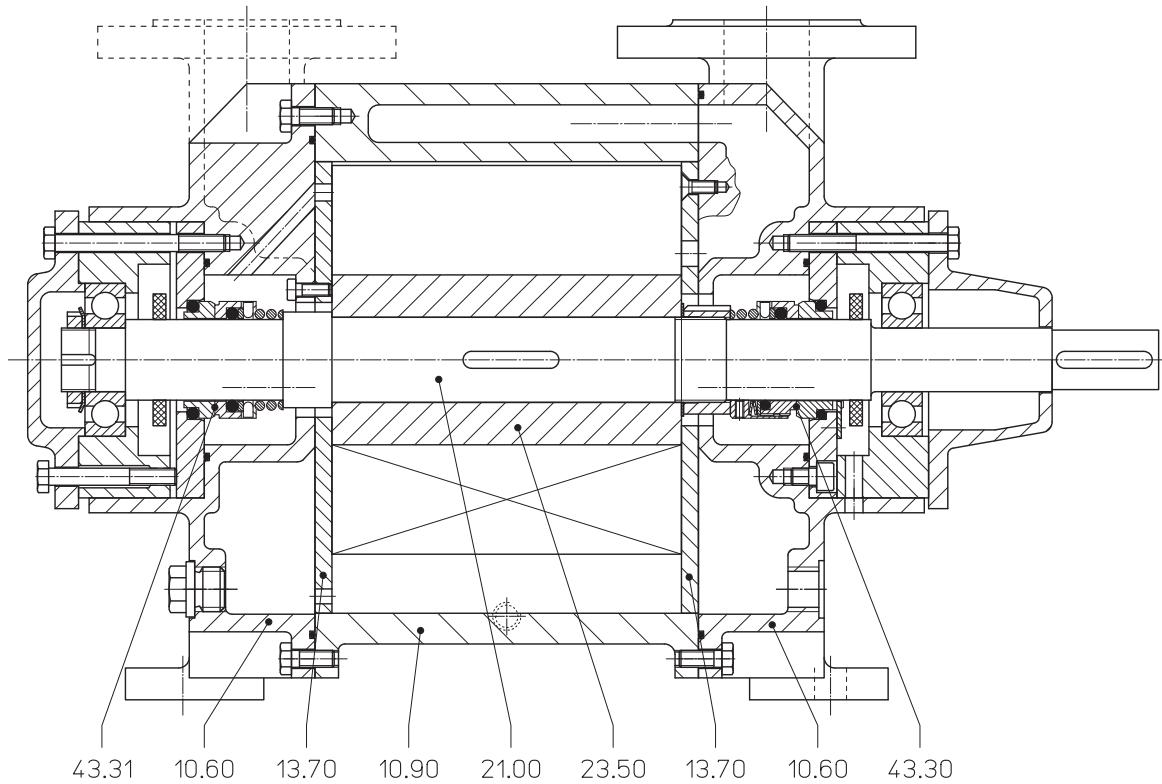

GENERAL TECHNICAL DATA

Pump Type	Units	LPH 40106	LPH 40411	LPH 40516
Speed	50 Hz 60 Hz	rpm rpm	1450 1740	
Maximum overpressure on compression	bar	0.6	0.8	0.4
Permissible pressure difference between suction and discharge side	max. min.	bar	1.2 0.2	1.2 0.2
Hydraulic test pressure (overpressure)	bar		3.0	
Moment of inertia of rotating parts of pump and water content	kg · m ²	0.0375	0.05	0.065
Noise level at 200 mbar suction pressure	dB (A)		65	
Minimum permissible pulley diameter for V belt drive	mm		160	
Maximum gas temperature	dry saturated	°C °C	200 100	
Service liquid:				
Maximum permissible temperature		°C	80	
Minimum permissible temperature		°C	10	
Maximum viscosity		mm ² /s	90	
Maximum density		kg/m ³	1200	
Liquid capacity up to middle of shaft		litre	3.5	4.5
Maximum flow resistance of the heat exchanger	bar		0.2	5.5

In selecting a pump, avoid choosing one which is likely to be operating at a combination of its maximum permissible limits e.g. maximum viscosity and maximum permissible pressure difference.

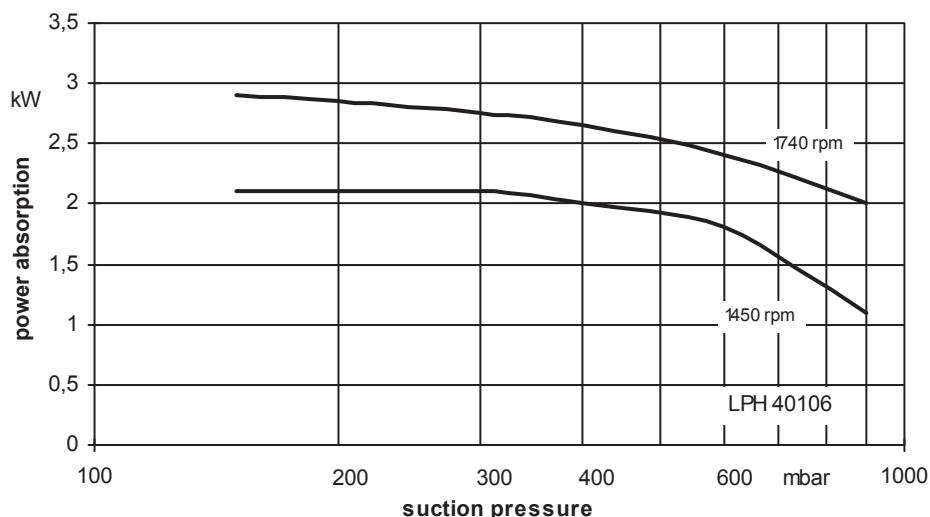

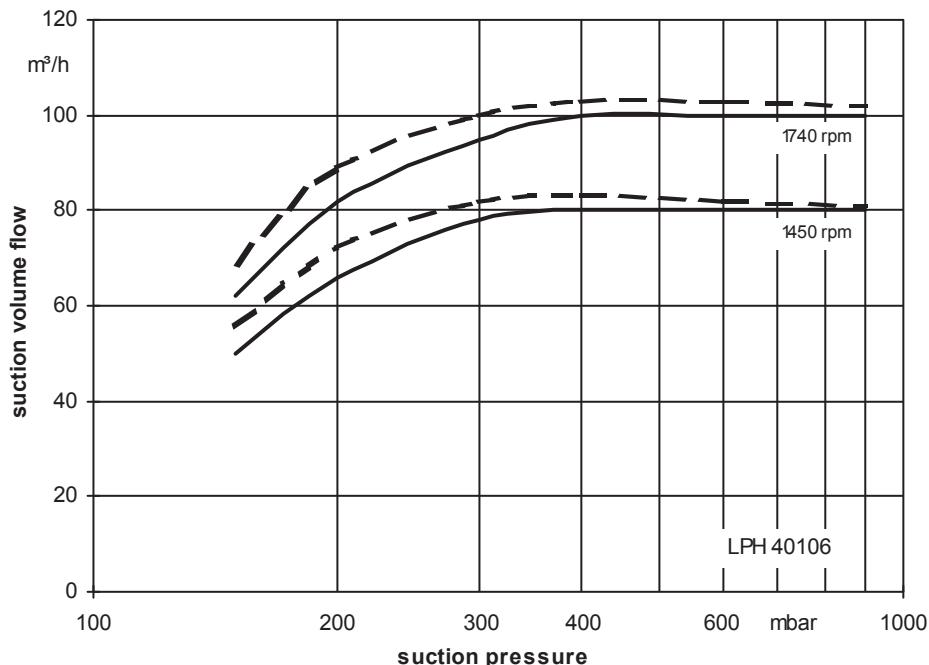

Materials

Performance Characteristics LPH 40106

The operating data is valid under the following conditions:

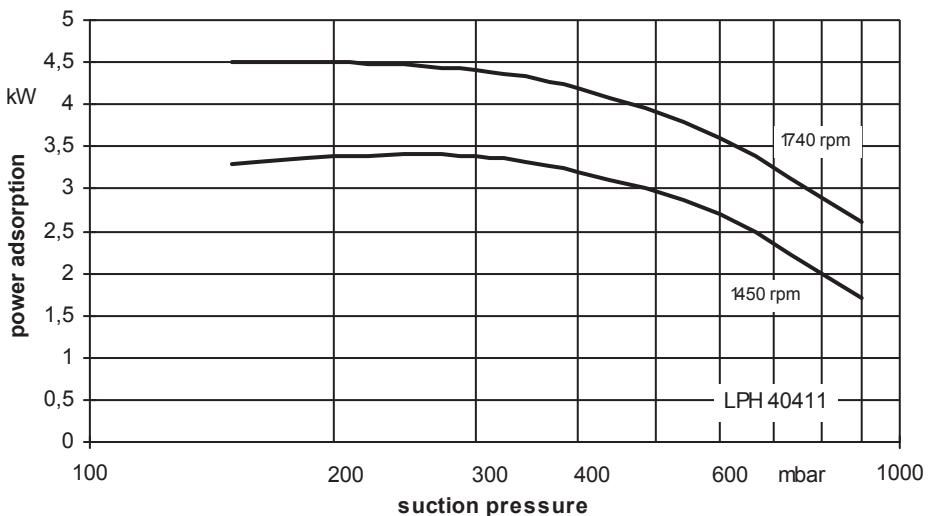

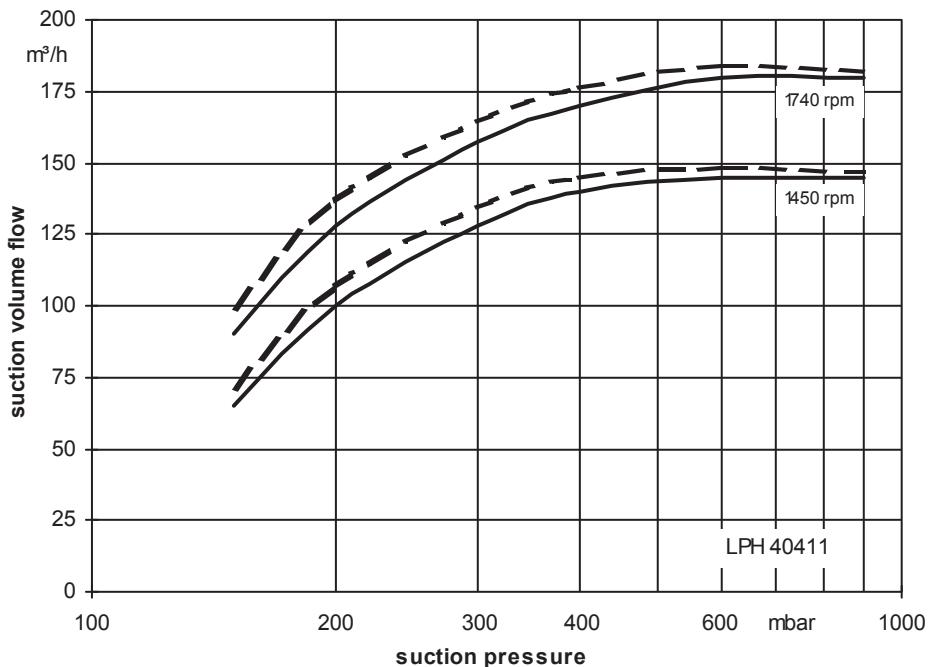

- Process media:
 - dry air: 20°C _____
 - steam saturated air: 20°C -----
- Service liquid:
 - water: 15°C

Pressure of gas to be evacuated: 1013 mbar (Atmospheric pressure)

The suction volume is related to the suction pressure.

Tolerance for the suction volume flow is 10% and for power 5%.

The maximum consumption of make up water occurs at the lowest suction pressure.

Performance Characteristics LPH 40411

The operating data is valid under the following conditions:

- Process media:
 - dry air: 20°C ——————
 - steam saturated air: 20°C -----
- Service liquid:
 - water: 15°C

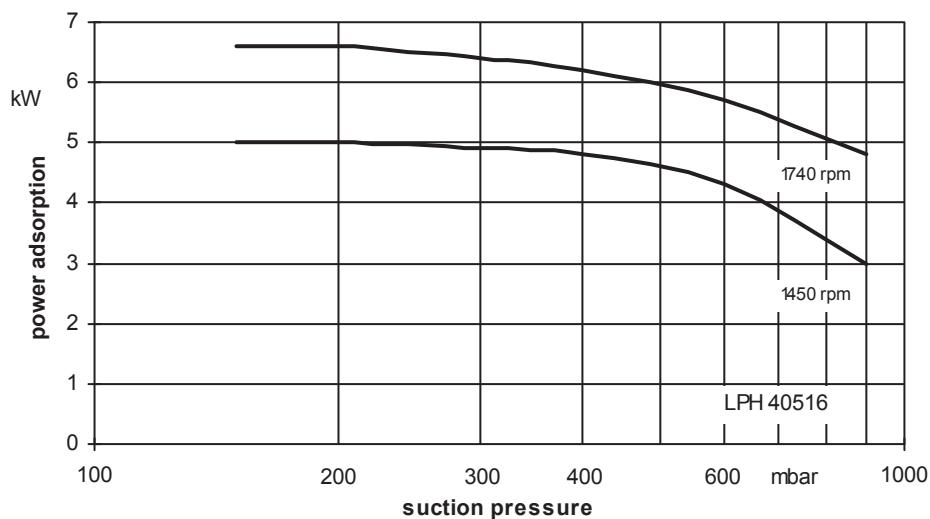

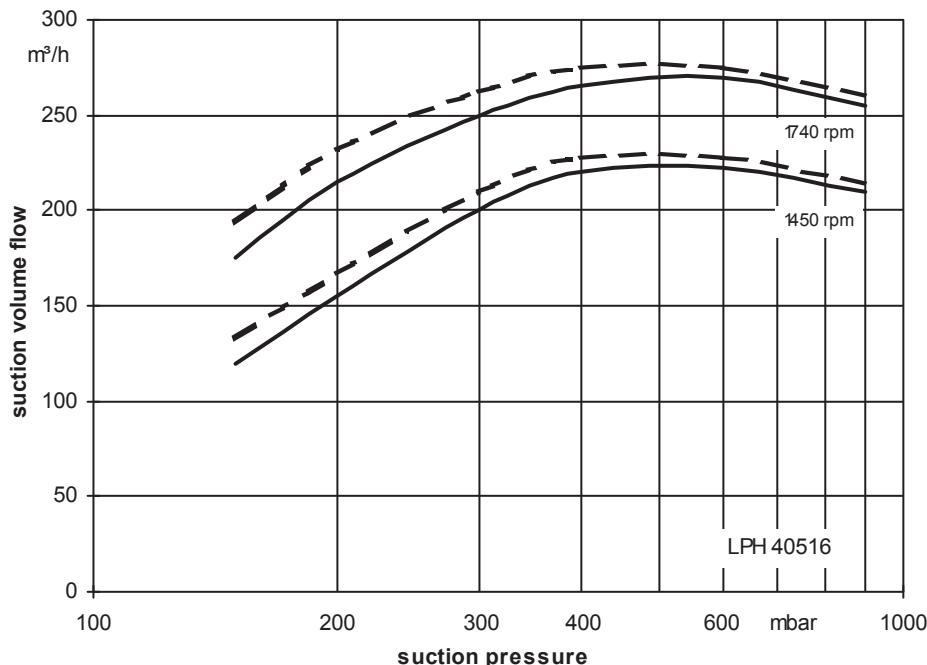

Pressure of gas to be evacuated: 1013 mbar (Atmospheric pressure)

The suction volume is related to the suction pressure.

Tolerance for the suction volume flow is 10% and for power 5%.

The maximum consumption of make up water occurs at the lowest suction pressure.

Performance Characteristics LPH 40516

The operating data is valid under the following conditions:

- Process media:
 - dry air: 20°C _____
 - steam saturated air: 20°C -----
- Service liquid:
 - water: 15°C

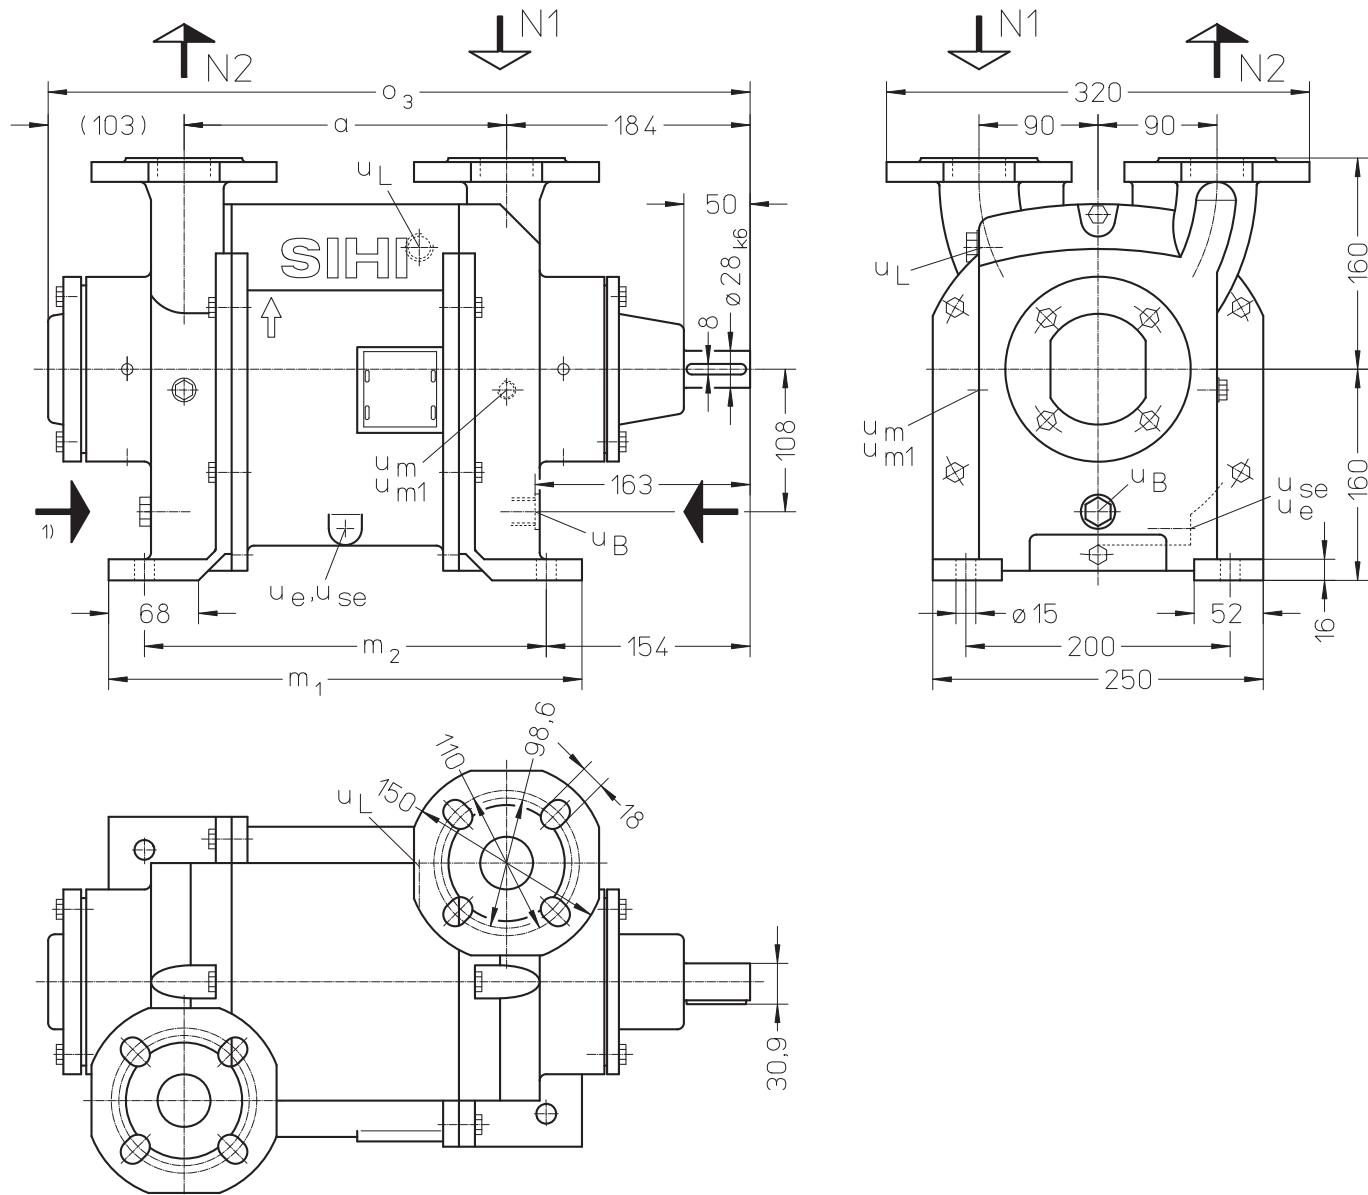

Pressure of gas to be evacuated: 1013 mbar (Atmospheric pressure)

The suction volume is related to the suction pressure.

Tolerance for the suction volume flow is 10% and for power 5%.

The maximum consumption of make up water occurs at the lowest suction pressure.

Dimensions LPH 40106, LPH 40411, LPH 40516 with single mechanical seal

¹⁾ = Connection u_B on both sides is only necessary for LPH 40516

N1 = Gas inlet DN 40 (according to DIN 2501 PN 10)
 Gas inlet 1 ½" (according to ANSI 150 lbs)

Motor Selection

For our products we offer a lot of different motor types.

To identify the right motor please specify frequency, voltage and protection class.

Example of an Order:

LPHX 40106 AB AGE 0K 1 with 3.0 kW AC motor, 50 Hz, 400V Δ, IP55
