

Peristaltic pumps

SERIES ASH

Design ID

Applications

In wastewater and clarification plants; the chemical and petrochemical industry; pulp, paper, and textile industry; soap and grease industry; construction; ceramics and montan industry; paints; meat and fish processing industry; tanneries, cosmetics, etc.

Suitable for pumping and metering low-viscosity and high-viscosity liquids, neutral or aggressive liquids, undiluted or abrasive liquids, liquids containing gases, liquids prone to foaming, also liquids with fibrous or solid particles.

Functionality

Dry self-priming displacement pump without gaskets or valves.

Pumping elements are the pump hose and rotor with sliders.

As the rotor turns, two sliders (aligned at 180-degree from each other) alternately compress the pump hose and move the pumped liquid incrementally from the suction to the pressure side.

The thick-wall, fabric-reinforced pump hose subsequently opens automatically, creating an underpressure situation that effects continuous suction.

The pumped liquid passes through the pump hose without contacting mechanical components. The smooth flow results in a gentle pumping action without turbulence and emulsification.

The direction of rotation can be reversed, thereby reversing the pumping direction.

Structural design

Glands and packing rings elastically clamp the hose (placed between the pump housing and the rotor) onto the pump connectors in the pump housing.

The bearings of the asymmetrical rotor are arranged inside the compact pump housing.

The pump housing is sealed by means of a ventilated cover that is equipped with grease and coolant level indicators.

The short and elastic clamping of the pump hose ① and the asymmetrically-shaped rotor with the corresponding pump housing shape ② extend the life of the pump hose, reduce the pump's working temperature, and reduce the quantity of grease, coolant, and pumped liquid that will mix in the pump housing if the pump hose breaks.

The drive torque is transferred from the one-piece rotor through its shaft to the sliders, which are adjustable by means of adjuster panels.

Grease and coolant in the pump housing lubricate and cool the pump hose, the rotor, and the sliders.

Shaft seal ring(s) separate the pump area and bearing from each other and keep these areas sealed.

① European patent No. 0 569 875 and US patent 5,350,384

② European patent No. 0 577 946 and US patent 5,375,984

Technical specifications

Please refer to the diagram on page 2 or the separate individual diagrams for pump capacities, permissible speed ranges, and required drives.

Output	Q	m³/h l/min	to	60
				1000
Temperature of pumped liquid	t	°C	to	80
Differential pressure	Δp	bar	to	15
Maximum pump pressure	p _d	bar	to	16
Achievable underpressure	p _s	bar	① to	0.95
Viscosity	v	mPa·s	① to	100000
Permissible solids content	Vol %		to	20

The specified performance data are intended to provide only an overview of the product and its performance! The data are influenced by the parameters: speed, operational mode, the elastomer used, type and temperature of the pumped liquid, and the pump size.

Refer to the respective proposal and order confirmation for exact operational limits.

Maximum permissible grain sizes and fiber lengths

Size	15	25	32	40
Max. grain size mm	5	8	11	13
Max. fiber length mm	150	200	250	330

Size	50	65	80	100
Max. grain size mm	17	22	27	33
Max. fiber length mm	430	550	680	820

The pump speed must be reduced as the proportion of solids and the viscosity of the liquid increase.

① Without using a supplemental vacuum up to 0.65 bar / up to 40,000 mPa·s

Materials

Description	Material type
Pump housing	ASH 15 ... 80: EN-GJL-250 ASH 100: EN-GJS-400-15
Pump cover	ASH 15: acrylic glass ASH 25 ... 100: QSt 52-3
Pump connector	see page 3 "Type key"
Rotor	EN-GJS-600-3
Slider	aluminum alloy, optional EN-GJS-400-15
Pump hose	see page 3 "Type key"

Drive unit

See page 10 for the drive options.

Drives from any manufacturer can be used. Refer to the manufacturer's documentation for technical specifications and dimensions.

Setting up the pump

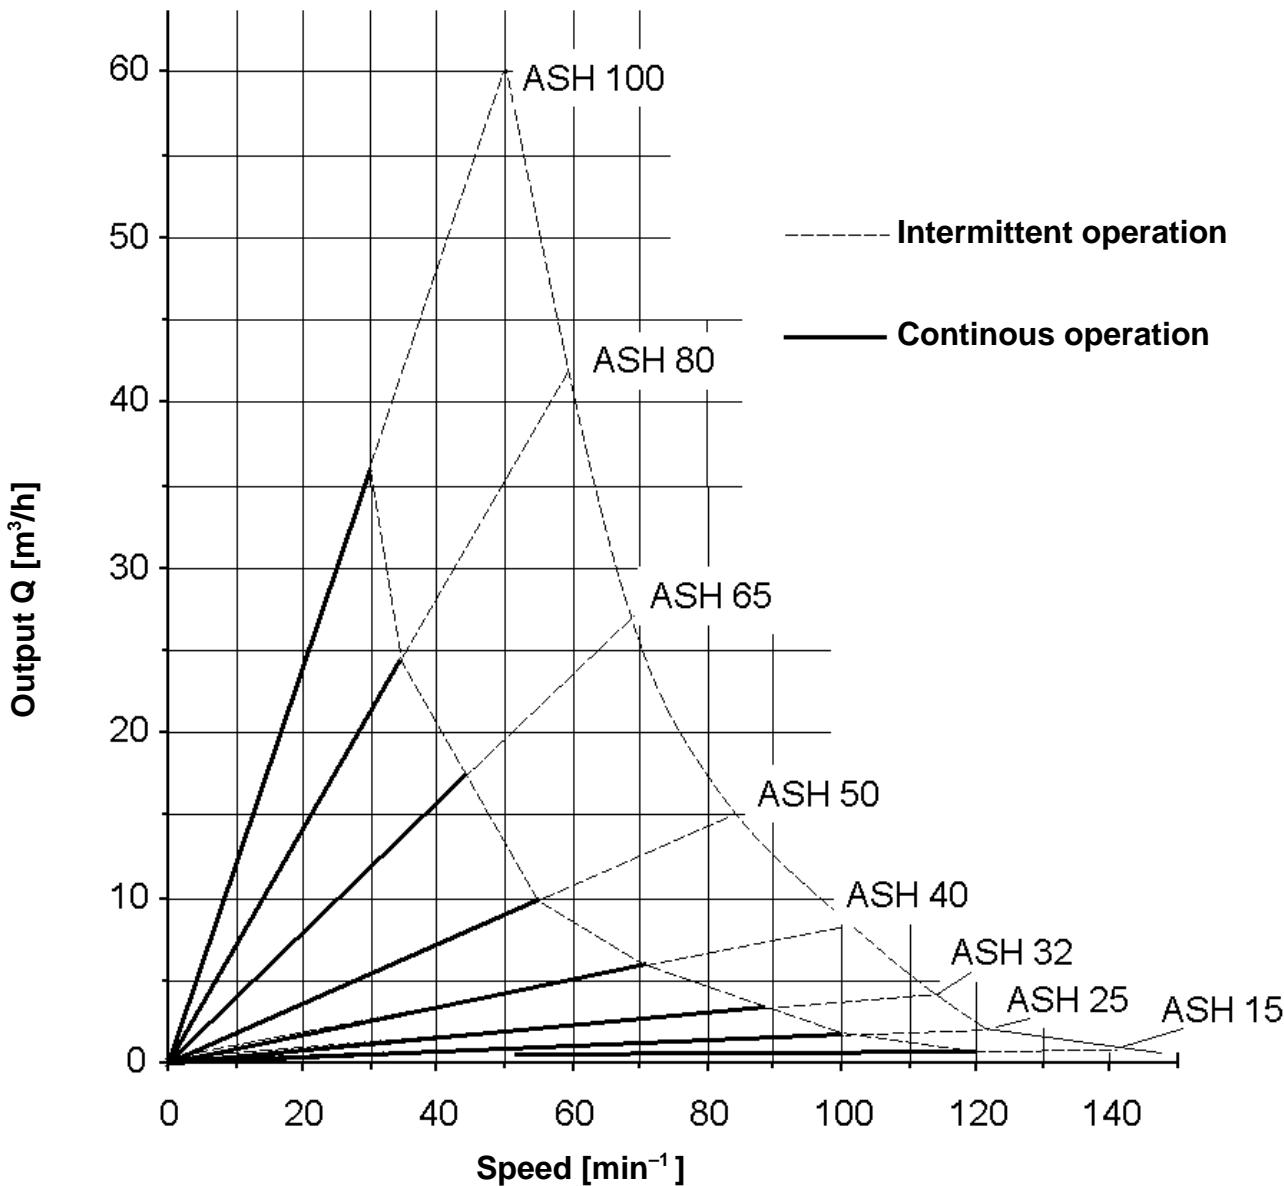

ASH peristaltic pumps are set up horizontally.

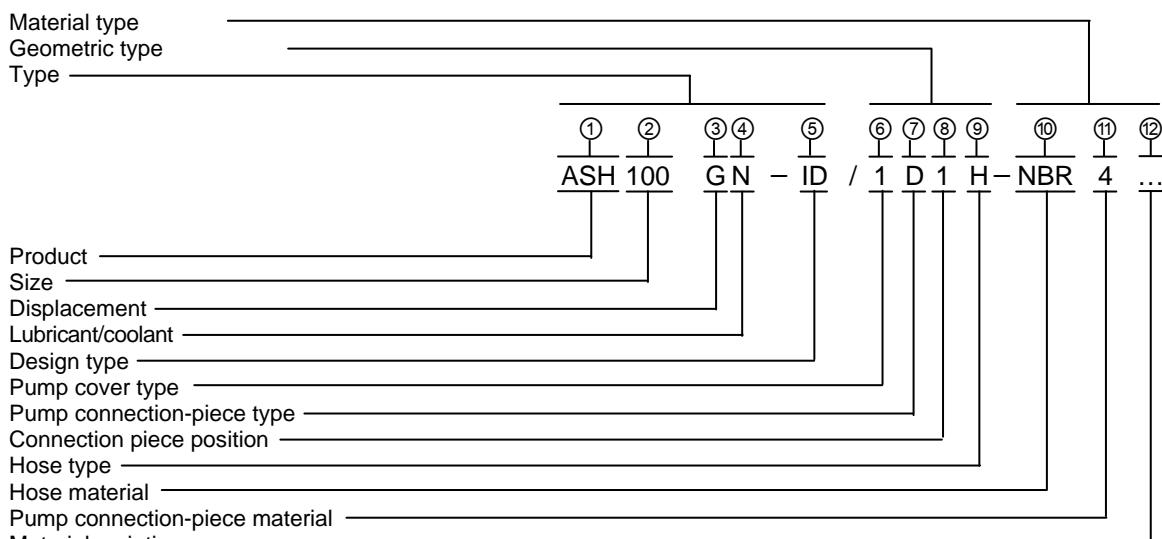

The pump and the drive are bound together by means of an elastic coupling; they are mounted on a shared base plate. See pages 8 and 9 for configuration, dimensions, and weight of pump units without a drive.

Dimensions and weights for pump units with drives are available upon request.

Diagram

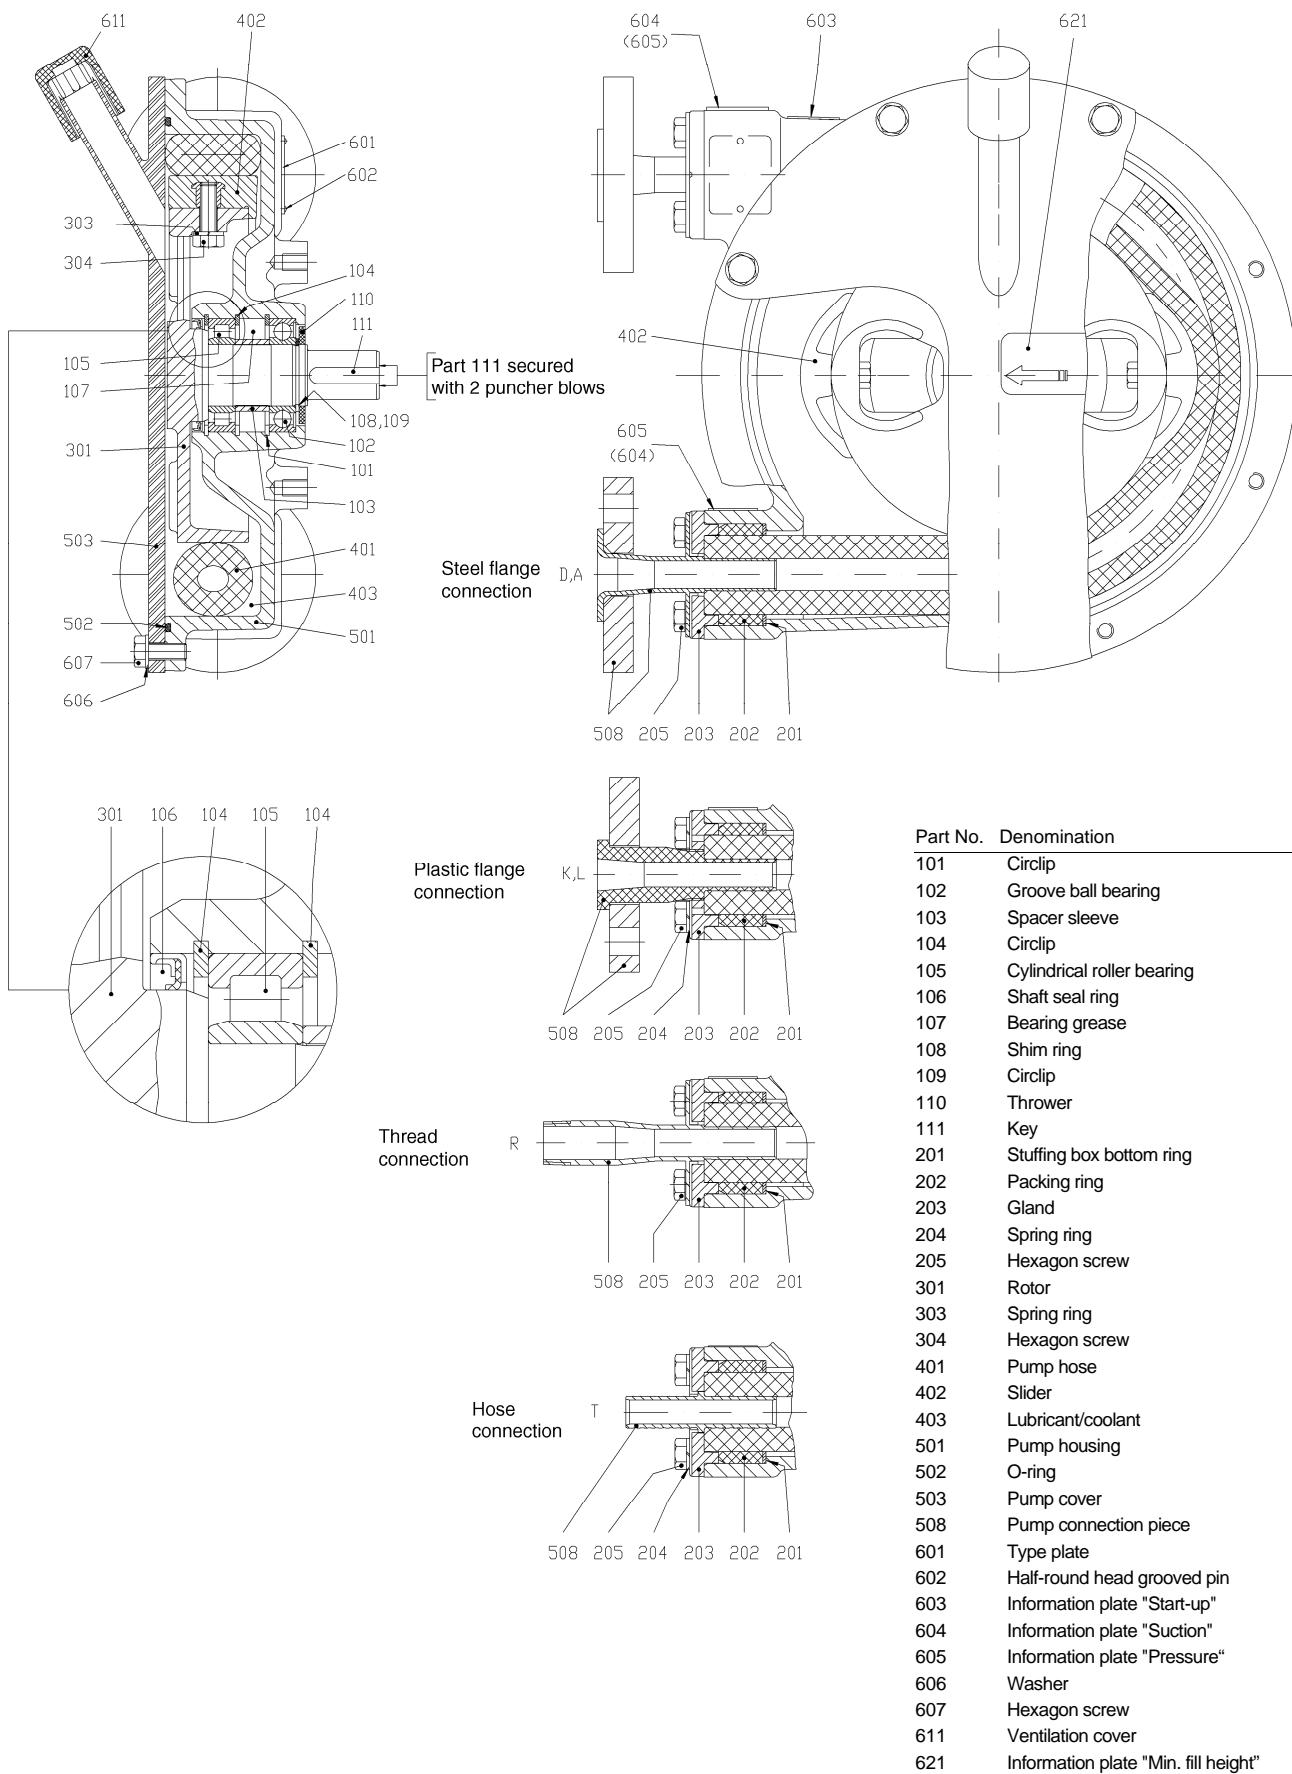

Used for rough selection of the pump size and rotational speed in dependence of the desired flow rate. Refer to the individual diagram fields for the exact design data.

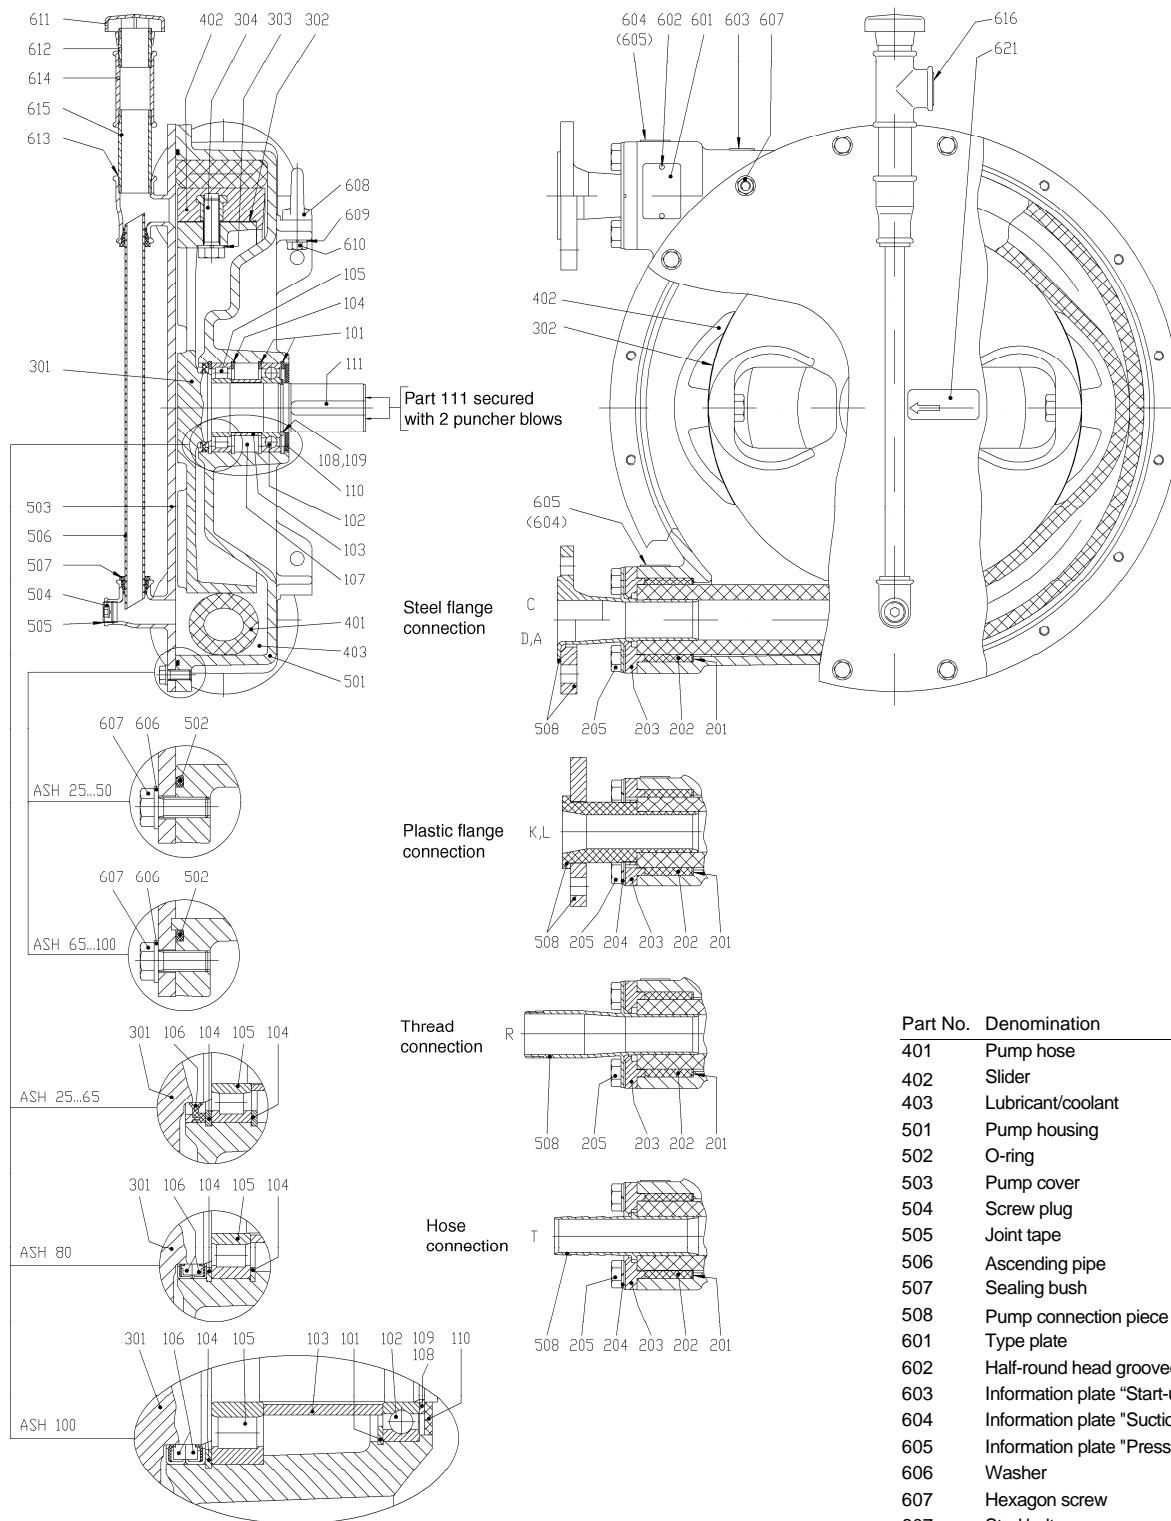

Type key**Explanations for the type key**

Position in type key	Designation	Type
①	Product	ASH = ALLWEILER – peristaltic pump
②	Size	Possible sizes: 15, 25, 32, 40, 50, 65, 80, 100 The numbers represent the inner diameter of the pump hose in mm.
③	Displacement	G = Slider
④	Lubricant/coolant	N = Glycerin X = Special variations
⑤	Design type	ID = Industrial design type with internal bearings
⑥	Pump cover type	1 = Pressureless, ventilated/vacuum resistant X = Special type of pump lid
⑦	Pump connection-piece type	D = Raised edge EN 1092-1/33/PN10 with lapped flange, connection dimensions according to DIN 2501-PN10 C = Flange with sealing strip shape according to C DIN2633-PN16 A = Raised edge with lapped flange, connection dimensions according to ANSI B16.5 class 150 K = Collar bush DIN 8063-7 (plastic) with lapped flange, connection dimensions according to DIN 2501-PN10 L = Smooth shoulder (plastic) with lapped flange (plastic) according to DIN8063-4-PN10, Connection dimensions according to ANSI B16.5 class150 R = Pipe outer threads according to DIN 2999 T = Nozzle X = Special pump connection-piece type
⑧	Connection piece position	1 = Top 2 = Left 3 = Bottom 4 = Right } as viewed from the drive
⑨	Hose type	H = High-pressure hose with two doubled fabric inserts M = Medium-pressure hose with one doubled fabric insert X = Special variations
⑩	Hose material	NR = Isoprene rubber (natural rubber) NBR = Acrylonitrile-butadiene rubber CSM = Chlorosulfonated polyethylene EPDM = Ethylene propylene diene terpolymer X = Hose material in special version
⑪	Pump connection-piece material	3 = Polyethylene 4 = 1.4571 X = Pump connection-piece material in special version
⑫	Material variations	X = Special variations
